Assignment 1211 Feedback—Direct Manipulation Application

Trixie Roque   *trixr4kdz / euqor00@gmail.com*

Notes while running (asterisks indicate major observations):

• Woo colors **:)** (*2b*)

• All function points look fulfilled: flick, bounce, motion. Let's see the code… (*3a*, *3b*, *4a*)

Code review (asterisks indicate major observations):

1. Yay, no tabs **:)** (*+4c*)

2. I see what you did here, but this should have been in the *boxes-touch-demo.css* file (which was removed) because these individual box sizes are *specific* to the demo page. (*4b*)

3. This is a function call, so for once don't space out the parenthesis. (*4c*)

4. Unless adjacent to same-sided parentheses, have a space before and after braces. (*4c*)

5. Oops magic number! (I know that the `10000` ones are from my own demo code, but I did say the demo code may need to be cleaned up!) (*4b*)

2b — **+**

3a — **+**

3b — **+**

4a — **+**

4b — **|** …Ultimately just a couple of glitches, but separation of concerns is important to recognize, and c'mon Dr. Toal has railed against magic numbers from the beginning **:)**

4c — **+** …There were glitches, as seen above, but in the end severity is pretty low.

4d — **+**

4e — **+**

4f — **+** …With extended due date to 1213.
